

COVER CROP

TILLAGE RADISH

Tillage Radish® drills down where steel cannot reach. It tills the soil naturally and better than any tillage equipment possibly can. Easy to plant, reaching full growth within 30 days. Taproot typically reaches over 30". Rapid spring decay results in massive soil voids for air and water movement. Improves drainage and air movement and helps suppress nematodes. Shades out winter annual weeds with dense foliage cover.

Relative Days (DS) 30

Type Cover Crops & Biological Fumigants

Drilling: (7.5" rows), 6 lbs. per acre.

Broadcast/Aerial: 8-10 lbs. per acre.

Precision Planting (15" with 4: in-row spacing): 4 lbs. per acre.

For Forage: Increase drilling rate to 9-10 lbs. per acre.
